Github Pages?

Github Pages란?

깃허브 사용자가 공개 레파지토리에서 호스팅을 이용할 수 있도록 한다.

깃허브 페이지는 기본적으로 HTML, CSS, JS로 구성된 파일을 구동하고 배포해 static 웹 사이트를 호스팅 할 수 있게 해주는 서비스이다.

새 레파지토리 만들기

 New

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk ().*

Owner *

Repository name *

/ React-test

✔ React-test is available.

Great repository names are short and memorable. Need inspiration? How about [super-octo-robot](#) ?

Description (optional)

- ☒  **Public**
Anyone on the internet can see this repository. You choose who can commit.
- ☐  **Private**
You choose who can see and commit to this repository.

Initialize this repository with:

- ☐ **Add a README file**
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template: None ▾

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Set up GitHub Copilot

Use GitHub's AI programmer to autocomplete suggestions as you code.

Get started with GitHub Copilot

Add collaborators to this repository

Search for people using their GitHub username or email address.

Invite collaborators

Quick setup — if you've done this kind of thing before

 Set up in Desktop or HTTPS SSH https://github.com/dPwls03/React-test.git 

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# React-test" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/dPwls03/React-test.git
git push -u origin main
```

프로젝트 준비 & 깃허브 연결

```
C:\Users\최예진\Desktop\프로그래밍 언어\React\0520\test>git init
Reinitialized existing Git repository in C:/Users/최예진/Desktop/프로그래밍 언어/React/0520/test/.git/

C:\Users\최예진\Desktop\프로그래밍 언어\React\0520\test>git add README.md

C:\Users\최예진\Desktop\프로그래밍 언어\React\0520\test>git commit -m "first commit"
On branch master
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   package.json
        modified:   src/App.js

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        src/ToDoContext.js
        src/components/
        yarn.lock

no changes added to commit (use "git add" and/or "git commit -a")
C:\Users\최예진\Desktop\프로그래밍 언어\React\0520\test>git branch -M main

npm run deploy

```
C:\Users\최예진\Desktop\프로그래밍 언어\React\0520\test>npm run deploy

> test@0.1.0 npmdeploy
> npm run build

> test@0.1.0 build
> react-scripts build

Creating an optimized production build...
One of your dependencies, babel-preset-react-app, is importing the
"@babel/plugin-proposal-private-property-in-object" package without
declaring it in its dependencies. This is currently working because
"@babel/plugin-proposal-private-property-in-object" is already in your
node_modules folder for unrelated reasons, but it may break at any time.

babel-preset-react-app is part of the create-react-app project, which
is not maintained anymore. It is thus unlikely that this bug will
ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to
your devDependencies to work around this error. This will make this message
go away.

Compiled successfully.

File sizes after gzip:

 60.06 kB  build\static\js\main.5e89b50a.js
 1.77 kB   build\static\js\453.56f46472.chunk.js
 263 B     build\static\css\main.e6c13ad2.css

The project was built assuming it is hosted at /React-test/.
You can control this with the homepage field in your package.json.

The build folder is ready to be deployed.

Find out more about deployment here:

  https://cra.link/deployment

> test@0.1.0 deploy
> gh-pages -d build
